Initial Display

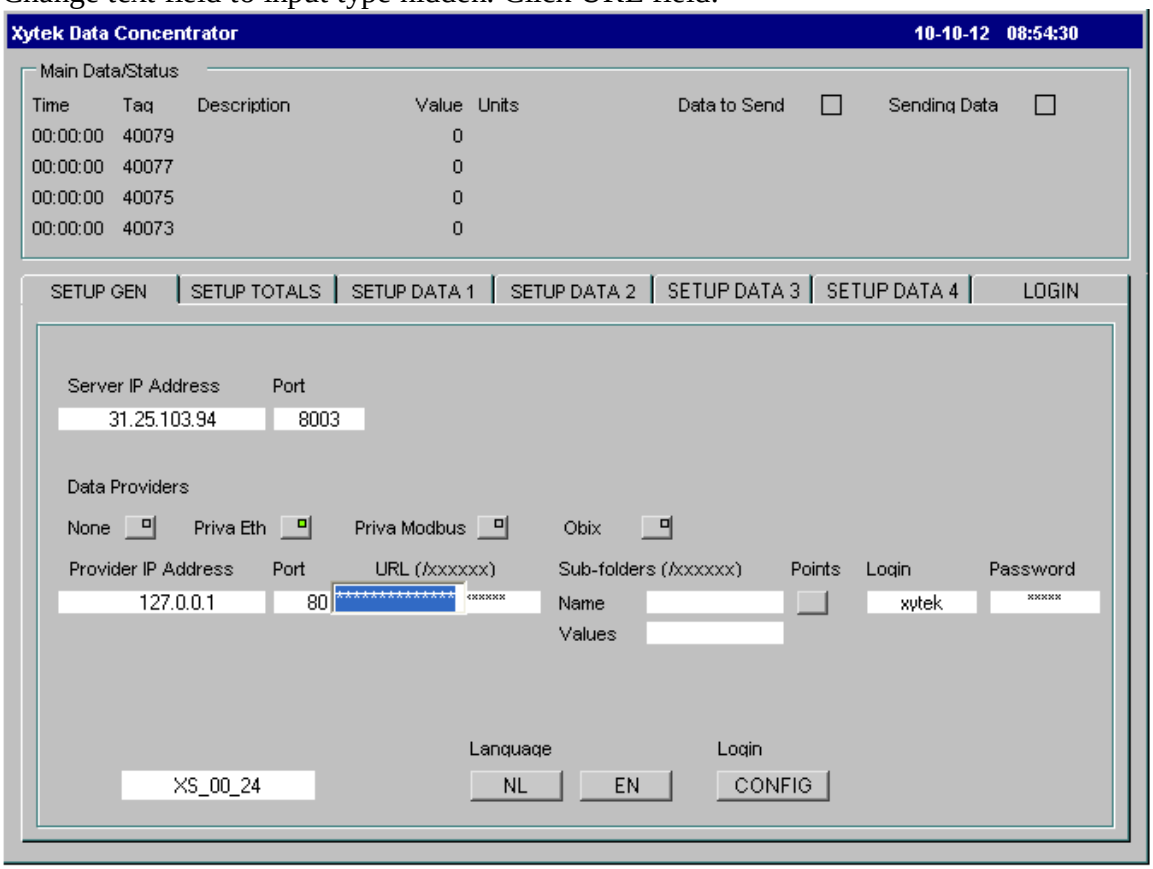

Click on URL Field:

The data-entry field has scroll bars and the original text is hidden to left. This is a string variable of length 16 and the field width should allow text to fit without scrolling. The rectangle width is 95 and height 12. Text size is 8 pt.

Change text field to input type hidden. Click URL field:

Now the data entry field is a rectangle without scroll bars.
Also click on a field with an underlying numerical variable and same result – a rectangle without scroll bars.
The scroll bars only appear with text variables and this applies to both IE and Firefox.
