

- 
- ▼ **One single programming system**  
for a whole pool of devices
  - ▼ **Data exchange and Interoperability**  
on application level
  - ▼ **Compatible Devices**  
from over 100 well-known manufacturers of automation devices

We all speak

# CoDeSys

And you?

[www.automation-alliance.com](http://www.automation-alliance.com)

## The CoDeSys Automation Alliance Concept A Standard Solution for all

**End users in the fields of mechanical and plant engineering are not willing to accept isolated solutions. That is why standards such as OPC for SCADA systems or the manufacturer independent IEC 61131-3 standard for programming industrial controllers have established themselves on the market.**

Nowadays, there is a further demand among end users for the networking of heterogeneous components, their interoperability and above all, the programming of these systems with only one single software tool. The system partner concept CoDeSys Automation Alliance not only fulfils these requirements, but is also a logical extension of the process of standardisation mentioned above. The widespread IEC 61131-3 – programming system CoDeSys contains the necessary functionality and creates a vast pool of devices all programmable with the same tool.

### Cooperation of hardware and software companies in the automation industry

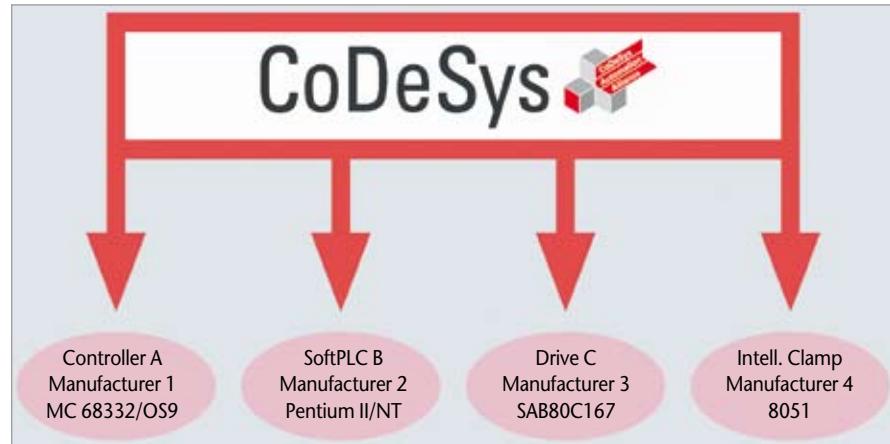

A large number of manufacturers of components for the automation industry (OEMs) already use CoDeSys as their programming system. It is thus only logical for them to cooperate on a general basis. As a platform and manufacturer-independent IEC 61131-3 programming system CoDeSys is the ideal link between the individual hardware components.

### Networking heterogeneous systems

Interoperability standards on the basis of standard transmission protocols such as TCP/IP, UDP/IP or CANopen form the technical basis for networking heterogeneous components. Without the user having to write special application code, the devices can communicate and exchange data via network variables, a multi-master mechanism.

### Programming heterogeneous systems with only one single programming system

By using standard runtime systems on the target hardware it is possible to program all the devices with only one single development

**■ ■ ■ The programming system CoDeSys makes it possible to program PLCs of different performance categories and of different manufacturers**

tool: CoDeSys. Choosing the target hardware is just as simple as choosing a driver for your printer under MS Windows. The hardware manufacturers who are members of the CoDeSys Automation Alliance will supply the necessary drivers – the so called target support packages – along with their hardware.

### End-user-friendly

System integrators and application programmers have a pool of software-compatible devices at their disposal. Broad-based suppliers offering the full range of automation products can, therefore, no longer force their customers to buy only their devices. If necessary, the user can fall back on second source devices which do not require the development of a further application.

### The most important CoDeSys features

- ▼ Graphic editors for programming in Sequential Function Chart (SFC), Ladder Diagram (LD), Function Block Diagram (FBD), Continuous Function Chart (CFC, free hand FBD)
- ▼ Textual editors for programming in Instruction List (IL) and Structured Text (ST)
- ▼ C function calling
- ▼ Full range of standard data types according to IEC61131-3 incl. LREAL with FPU code generation
- ▼ User defined data types: Arrays, Structures, Enumeration, Alias, Pointer
- ▼ Comfortable programming with Syntax Colouring, Multiple Undo/Redo, Context sensitive Input Assistance, Context Menus in all editors, Graphic Project Comparison
- ▼ Library management for creating and managing user defined libraries
- ▼ Complete offline simulation
- ▼ Comprehensive Online Functionality: Monitoring, Writing and Forcing of variables and recipes, Debugging of complete projects (Breakpoints, Stepping, Single Cycle, Call Stack), Power Flow, Online Change, Trace Functionality, PLC Browser (command interface to the controller) etc.
- ▼ Integrated Compilers for the following processor families and derivatives: 8051, H8, 80C167, 68xxx, Coldfire, PowerPC, 80x86, ARM, MIPS, SH2/SH3/SH4, TriCore, TMS28xx/29xx
- ▼ OPC-Server, DDE-Server
- ▼ Communication Gateway for external access and remote maintenance
- ▼ Hierarchical graphical PLC configuration (Profibus, CANopen, ASi, DeviceNet)
- ▼ Integrated Visualization (Executable directly in the programming system, in the Windows Runtime, on the Target, via a Web Browser)
- ▼ Optionally integrated SoftMotion tool kit (3-dim. NC functionality, CAM, PLCCopen motion POU's, drive configuration etc.)
- ▼ Optionally integrated Engineering Interface for connection to Source Code Management Systems, Multi User Operation and general tool interface
